MESH Email Security

CYBER SECURITY EVENT

MESH

FOR BUSINESS OWNERS

MESH

Stop email attacks before they cost you

Why every business needs proper email security, and how Mesh provides it.

October 2026

THE RISK TO YOUR BUSINESS

One email can cost more than a year of protection

€2.8bn

lost to business email scams in 2024, from 21,442 reported cases

~€130k

average loss per reported case: enough to sink a small business

66%

of security professionals saw these attacks increase over the past year

Sources: FBI IC3 2024 Internet Crime Report (via Nacha); 2025 survey of 1,200 professionals cited by Bitdefender. Average is losses ÷ cases.

WHAT LANDS IN YOUR INBOX

The attacks look like everyday business email

Fake invoices

A "supplier" says their bank details have changed. Your next payment goes to a criminal.

Boss fraud

An urgent request "from you" asks staff to pay someone or buy gift cards.

Fake logins

A convincing Microsoft page steals a password and opens up your whole mailbox.

Ransomware

One opened attachment can lock your files and stop the business trading.

Brand copycats

Scammers pose as your business or a brand you use to fool staff and customers.

Mesh stops all six

Plus spear-phishing, whaling, sextortion and display-name spoofing.

WHY YOU NEED MESH

Basic filters and staff training aren't enough

Without it

Scams get through. Many carry no virus, so standard filters let them pass.

Staff are the last line. One busy moment and one click is all it takes.

You carry the loss. Money, data, downtime and customer trust.

With Mesh

Threats are stopped early, before most ever reach an inbox.

Scams are spotted even when there's no virus, like fake invoices and boss fraud.

Protection runs 24/7, managed by your IT partner, not by you.

HOW MESH PROTECTS YOU

Two layers of defence around your email

At the front door

Every email is checked before it reaches your business, and dangerous ones are blocked.

Inside the inbox

Mesh watches Microsoft 365 mailboxes and pulls out threats that slip through.

Nothing new for staff

No software to install or habits to change. Email just works, more safely.

WHAT IT MEANS FOR YOU

Peace of mind, without the IT headache

Protect your cash

Cut the risk of paying a fake invoice or wiring money to a scammer.

Keep trading

Reduce the chance of ransomware or a hacked account shutting you down.

Guard your reputation

Make it harder for scammers to use your name against your customers.

Fully managed

Your IT partner sets it up and runs it. You don't lift a finger.

Fewer interruptions

Less junk and fewer suspicious emails for staff to second-guess.

Independently certified

Mesh holds SOC 2 Type II and ISO 27001, recognised security standards.

WHO STANDS BEHIND IT

Proven protection, backed by Bitdefender

1,000s

of businesses already protected worldwide

11

G2 user-review awards (Autumn 2023), incl. Best Usability

2025

Became part of Bitdefender, a global cybersecurity leader

Next step: ask us to switch on Mesh for your business.
