Human Risk Intelligence for IT and security teams

See where human risk is concentrated and what to prioritize first.

AI is changing the threat landscape.

People remain a target.

01

AI is accelerating how organizations work.

02

The same capabilities are available to attackers.

03

People and identities remain a critical part of the attack surface.

Understanding human risk has never been more important.

Your risk signals already exist.

The challenge is connecting them.

Separate signals. One clearer view of human risk.

Awareness training

Shows learning progress and behavior.

Phishing simulations

Shows susceptibility and response.

Credential exposure

Reveals exposed accounts and passwords.

Policy management

Shows acknowledgments and policy gaps.

NEW

uHealth

Connects these signals with wider identity and access context.

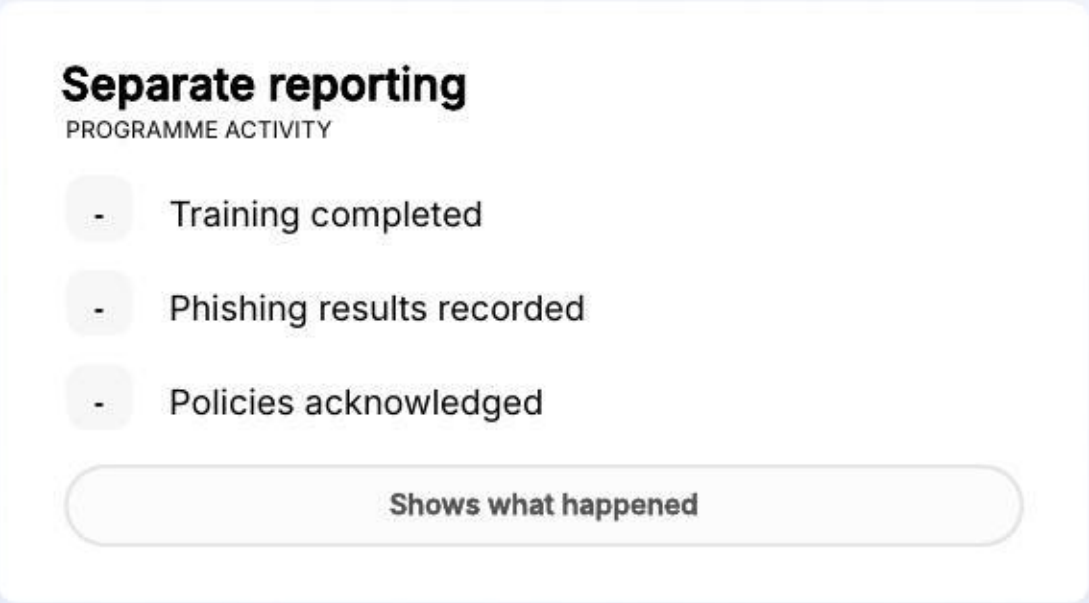
HRI

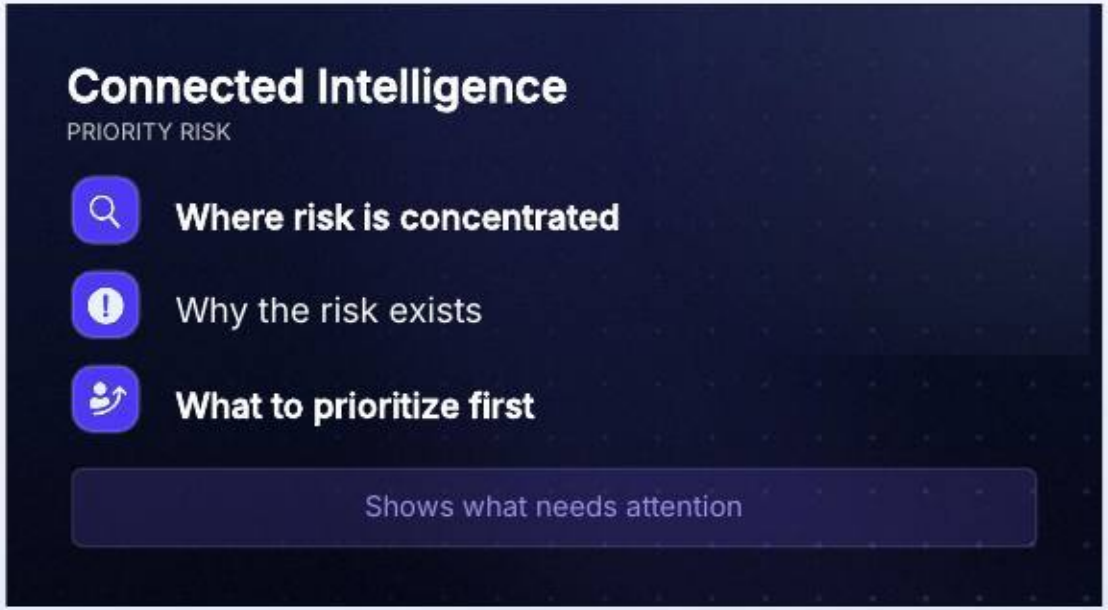
- Clearer risk visibility
- Better prioritization
- Focused action

Separate reports show what happened.

Connected intelligence shows what matters next.

Your existing security activity creates useful signals. uHealth helps show what they mean together.





UHEALTH

Meet uHealth

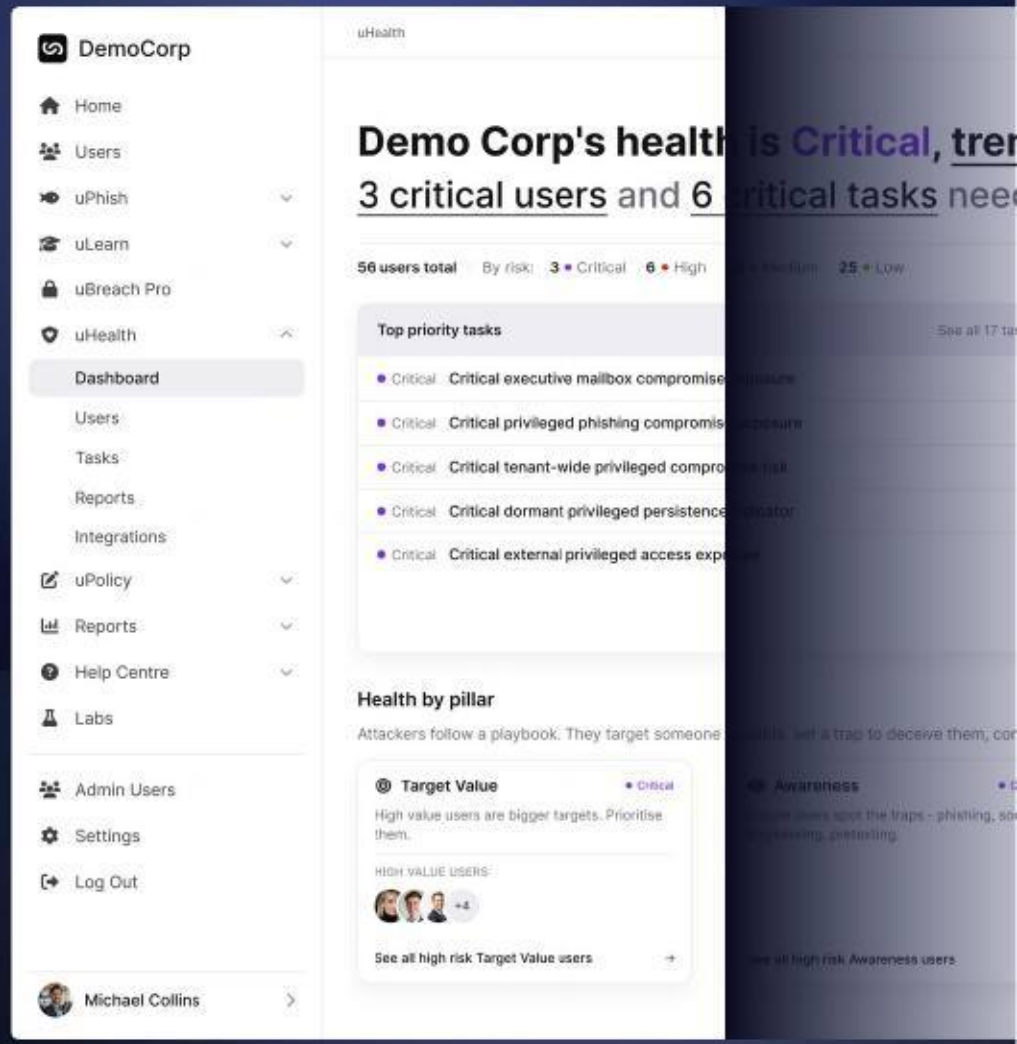
Human Risk Intelligence in action

uHealth connects risk signals across Target Value, Awareness, Hygiene, and Access to show where risk is concentrated and what needs attention first.

One view of human risk
Connect scattered risk signals into one clearer view.

Clearer priorities
Surface where risk is concentrated and what to prioritize first.

Track progress
See how your risk posture changes over time.



UHEALTH

Turn clearer risk insight into focused action

Understand where risk sits, prioritize what matters, and track progress over time.

Understand the risk

- **Risk clarity**
  See where human risk is concentrated.
- **Connected context**
  Understand why multiple weaknesses matter together.
- **Toxic Combinations**
  Surface where risk signals converge.

Act on the risk

- **Focused remediation**
  Know what needs attention first.
- **Compliance evidence**
  Show visibility, action, and progress.
- **Measurable improvement**
  Track how risk changes over time.

NEXT STEPS

See your human risk more clearly

Connect your existing risk signals, understand what matters most, and focus action where it can have the greatest impact.

01
Connect the signals

Bring awareness, credential, identity, hygiene, and access risk into a clearer view.

02
Find what matters

See where weaknesses combine and which users need attention first.

03
Prioritize action

Focus remediation and track how your risk posture changes over time.
