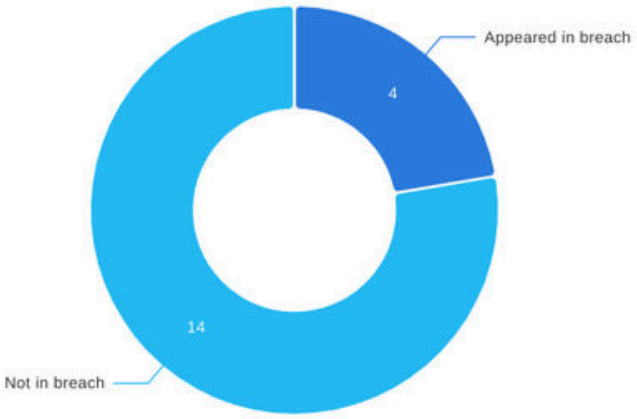
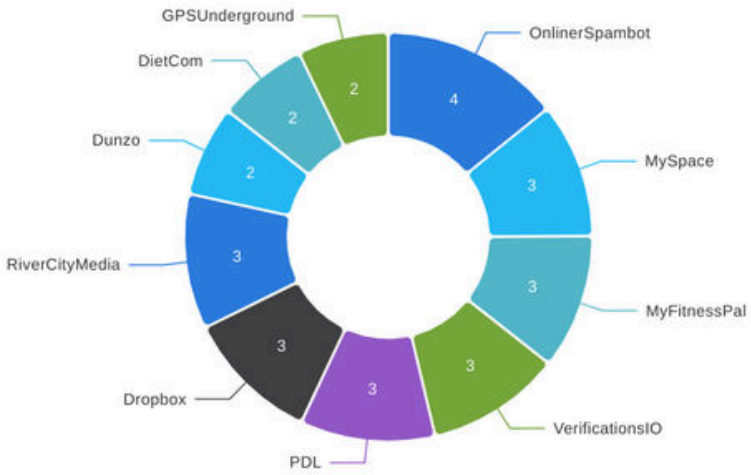
Users appearing in major breaches



Services your users ' data appeared in the most



UBREACH

uBreach by usecure helps protect your business by detecting when employee emails or credentials are exposed on the dark web. It continuously scans breach data and alerts you instantly so you can act fast and stay secure.

Key Benefits:

- Finds exposed employee emails and credentials
- Sends real-time breach alerts
- Shows what data was leaked
- Monitors your entire company domain
- Tracks and manages breach responses

UPHISH

uPhish by usecure helps your business fight phishing attacks by training employees to spot and avoid suspicious emails. It sends realistic phishing simulations and tracks results to build awareness and reduce risk.

Key Benefits:

- Simulates real phishing attacks safely
- Trains staff to recognise and report threats
- Tracks employee progress and risk levels
- Offers ready-made phishing templates
- Strengthens your organisation’s overall security awareness
